Description

Summary

Fixes the PR-report action crash (`AttributeError: 'super' object has no attribute 'transform'`) caused by a WeasyPrint ↔ pydyf version mismatch, and adds a manual re-run trigger to backfill reports.

Root cause

WeasyPrint 62.x is incompatible with `pydyf` ≥ 0.11 ([Kozea/WeasyPrint#2620](https://github.com/Kozea/WeasyPrint/issues/2620)); `pydyf` 0.12 (Dec 2025) changed the `Stream` API. `pydyf` was an unpinned transitive dependency, so CI pulled the incompatible newer version.

Fix

- Pin `weasyprint==69.0` (current maintained release; the issue was resolved in 67+) and `pydyf==0.12.1` together so the pairing can't drift again. WeasyPrint stays the right tool — the report is static, server-rendered HTML with no JavaScript (its sweet spot; lightest deps, smallest PDFs). wkhtmltopdf is deprecated; Playwright/Chromium is overkill here.
- `pr-report.yml`: add a `workflow\_dispatch(pr\_number)` trigger to (re)generate any PR's report — used to backfill PR #1, whose report failed. The PR number and head SHA are now derived so the job works for both merge and manual runs.

Verification

- Reproduced and **fixed locally**: ``weasyprint==69.0 + pydyf==0.12.1`` renders our actual ``report_template.html`` to a valid 23 KB PDF.
- Both workflow YAML files validate.
- After merge, the report can be backfilled with: ``gh workflow run pr-report.yml -f pr_number=1``.

Tests

- [x] Local render verification (PDF produced) — the report tooling is CI-infra, not Django app code, so no unit test applies.
- [x] YAML validated; ``ci.yml`` ``test`` job unaffected.

Checklist

- [x] Targets ``develop``
- [x] No secrets committed
- [x] Scoped to the CI report tooling only
