What's included

- ✓ **django-simple-history==3.11.0** pinned; added to `INSTALLED_APPS` with `HistoryRequestMiddleware` (after auth) so every history row captures the **acting user**.
- ✓ **HistoricalRecords()** on the 10 **dashboard-managed models**: Service, Project, Certificate, SiteSetting, Statistic, Client, TeamMember, GalleryImage, Download, Inquiry — each gets a `historical_*` table (migrations included). Inline children (project images/milestones/updates) are **intentionally not tracked** to keep the feed signal-rich rather than noisy.
- ✓ **dashboard/activity.py** merges the newest history rows across all tracked models into one chronological feed.
- ✓ **"Recent activity" panel** on the Overview (action chip Created/Changed/Deleted, model, object name, actor, time-since) — replaces the old static blurb card.
