automated tests

What's included

- ✓ **Progress bars fill from 0 → their value** with an ease-out transition when scrolled into view, reusing the existing IntersectionObserver pattern (progressBarsAll, threshold 0.3, unobserves after firing).
- ✓ **Progressive enhancement done properly:**
- ✓ The fill carries its target width as a CSS var (--target) + a progress-bar class — no inline width, so the stylesheet can drive it.
- ✓ A pre-paint .js flag on <html> means JS users start at 0 and animate; **without JS the bar shows its true width immediately** (no flash, no broken state).
- ✓ **Reduced-motion** users jump straight to the target (no transition).
- ✓ Applied on the **ongoing projects** page and the **project-detail "Live status"** block.
