What's included

Dependency & config

- ✓ Pin `easy-thumbnails==2.10.1`, add to `INSTALLED_APPS`, `THUMBNAIL_QUALITY = 82`.
- ✓ Derivatives are generated on first request and cached under `MEDIA_ROOT` (gitignored); originals are **never upscaled**.

responsive_image template tag (apps/core/templatetags/media_extras.py)

- ✓ Inclusion tag → `<picture>` with a **WebP** `<source srcset>` + an **original-format** `<img>` **fallback**, each at **480 / 768 / 1200w** with a sizes hint, so the browser downloads only what it needs.
- ✓ `easy-thumbnails` derives the encoder from the file **extension**, not an option — so the WebP pass uses a `.webp`-extension thumbnailer (verified to emit real WebP bytes) while the fallback stays `.jpg/.png`.
- ✓ Optional ratio (e.g. 16:9, 1:1, 4:3) centre-crops; without it the image scales by width preserving aspect.
- ✓ A missing/corrupt source **degrades to a plain** `<img>`, **never a 500**.

Applied across public templates

home (hero, project cards, client logos), projects **list** / **detail** (hero + gallery) / **ongoing**, **about** (team photos), **gallery** grid. Dashboard admin thumbnails left as plain `<img>` (admin-only, not a Lighthouse target).
