feat(pwa): installable app — manifest, service worker, offline page

Phase 3 extra — makes the website **installable as an app** from Chrome (and to a phone home screen) as a Progressive Web App. Requested after the "can this be installed like an app?" question.

What's included

- ✓ **Web app manifest** at /manifest.webmanifest — rendered as a template so {% static %} icon URLs resolve to the **hashed** filenames in production.
display: standalone, navy theme, start_url: "/", and **192 / 512 + maskable** icons.
- ✓ **Branded icons** (navy field, white "D" + amber dot — matches the DIEYNEM. mark) generated into static/icons; collectstatic hashes them (verified end-to-end).
- ✓ **Service worker** at /sw.js (root scope) with a real fetch handler:
- ✓ **network-first for navigations** → visitors always get fresh content; the cached shell / an /offline/ page is only used when the network drops,
- ✓ **cache-first for content-hashed static assets** (immutable),
- ✓ **deliberately bypasses /dashboard/ and /admin/** so admin pages are never cached or served stale.
- ✓ **Offline fallback page**; manifest link + theme-color + apple-touch-icon + SW registration added to **both** the public and dashboard bases (so it's installable from either).
