What's included

- ✓ **ProjectListView** gains four filters: **service** (M2M, by slug), **sector**, **country**, and **status**. HX requests return only the results grid for swapping.
- ✓ **Filter options come from real data** — only sectors and countries actually in use, and only services that have published projects — so the dropdowns never offer a filter that yields zero results.
- ✓ **list.html** — a plain GET filter form (fully functional **without JS**) progressively enhanced with HTMX: selects auto-submit on change, and hx-push-url keeps every filtered view **shareable/bookmarkable** (real URLs, good for SEO).
- ✓ **_grid.html** — the swappable results partial with a live count and an empty/clear state.
- ✓ **HTMX loaded only on the projects page** via a new public extra_head block — every other page stays light (relevant to the upcoming performance item).
- ✓ **public.js** re-runs reveal + count-up on htmx:afterSwap, so swapped-in cards still animate (the listener is harmless on pages without HTMX).
